

## ROLL-THROUGH LABELER

### Conversion Kits for Packaging

Valco Melton's labeler conversion kits are totally enclosed, pressurized adhesive systems for Mateer-Burt, New Way, and Standard Knapp roll-through labelers. The kit replaces the open paste pot and belt. It provides more precise placement of glue patterns, uses less glue, and requires less cleanup time. Maintenance for the Valco Melton system is minimal with cleanup only taking a few minutes. The "quick-disconnect" applicator head is simply removed and flushed with water. Clean up of the open paste pot, paste belt, and glue from surrounding areas is eliminated. The system uses resin or dextrin adhesive from the same formulation used on case sealers/cartoners, allowing for a more economical adhesive buy.

- Belt Replacement
- Belt Adjustment
- Glue build-up on belt pulley
- Glue slinging
- Glue running down the label stack
- The open glue pot and its extensive maintenance
- Mis-glued labels caused by curvature of the label stack
- The need for special labeling paste

#### The Conversion Kit

Consists of a pressure tank, glue valves, an applicator head, electronic control assembly, and mounting brackets.

#### Adhesive Source

Valco offers several styles and sizes of pressure tanks. Diaphragm pumps and piston pumps are available for installations involving more than one machine. If desired, a central glue system can be used as the adhesive source

#### Controllers

Controls are enclosed in dust-proof, moisture resistant boxes and feature thumb wheel switch controls for precise adhesive pattern placement. Controls will automatically stop glue flow if a jam occurs in the gluing cycle.

#### Applicators

The adhesive applicator consists of 2 air-operated glue valves and a special applicator head that rests on top of the label stack. One valve is installed at each end of the applicator head, which insures uniform adhesive across the label and provides superior "suck-back" action which prevents adhesive from dripping between activations.

#### Brackets

Durable steel brackets maintain the proper alignment of the valve and applicator head. A strong, yet simple design assures easy installation and long use. Specific bracket packages are available for a variety of machine makes and models.
