

VALCO MELTON

PALLETIZING SYSTEMS

HOT MELT AND COLD GLUE DISPENSING SOLUTIONS

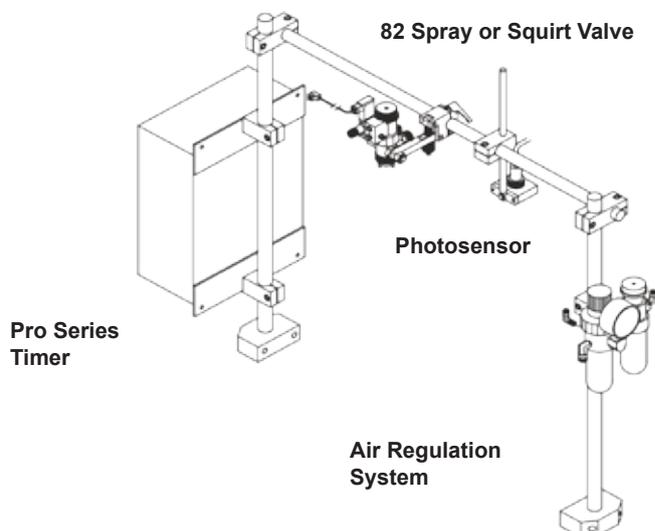

Minimize product damage before, during and after transportation with Valco Melton's adhesive-based palletizing systems. A wide range of hot melt and cold glue solutions are sure to meet the most demanding requirements.

Valco Melton's palletizing systems increase overall line efficiency by avoiding unnecessary costs related with stretch film wrap, such as material, disposal and intensive labor.

Our adhesive solutions not only protect your product, but also result in greater operator and customer safety. Achieve flawless end product while reducing costs and removing risk.

Cold Glue Palletizing Solutions

- A complete pallet stabilization system for load locking of shipping cartons and bags using either a squirt or a spray method.
- Great savings in material and labor costs over stretch film palletizing systems. Adhesive bonds prevent heat and moisture from damaging the packaged goods-- even during long storage periods.
- Ready to bolt-on system. Just connect air and electric supply and mount to your existing conveyor.
- Air Mizer in option for fan ear air control.
- No restrictions. Works on partial pallet load. Operates in any position.

Adhesive Spray Valves

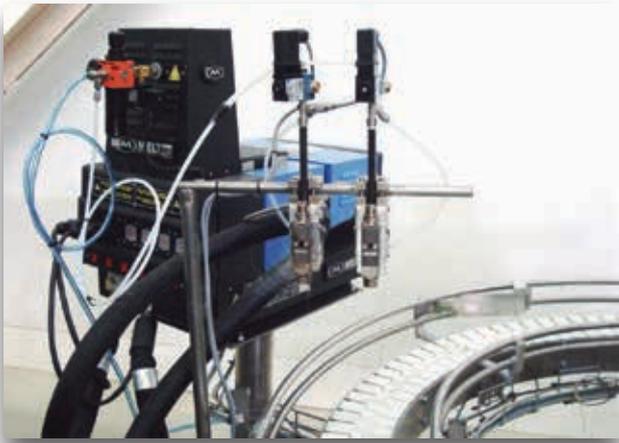

Valco Melton's 82 Series Adhesive Spray Valves help reduce downtime with a sealed tip that eliminates any possibility of adhesive drying and plugging the nozzle. Featuring a fully adjustable fluid volume and atomizing air controls, work changes are easier and faster. Choose *spray application* for bag palletizing. *Squirt, non-contact* version is optimal for cartons.

Adhesive Pump

Valco Melton's pumps feature an all pneumatic design that delivers a continuous supply of constant adhesive pressure directly from a pail or drum for as long as the material is being dispensed.

PRO Series Timer

PRO Series Timers are multi-purpose, time-based micro-processor driven electronic control systems that ensure precisely timed actuation of electric output devices. Designed for trouble free installation and reliable operation.

EC-4 Adhesive Melder

Valco Melton's EC Series hot melt adhesive unit offers optimum reliability and total control of the unit's operation. Its compact design and common footprint allow for easy installation in any already existing line. Innovative features like the auto-pressure dump valve and the optional autofeed system result in increased operation safety and minimal downtime.

Pattern Controls

The new MCP-6 Pattern Control is totally integrated in Valco Melton's EC Series. The MCP-6 is designed for easy programming and control of adhesive application systems to satisfy each user's specific requirements. Its user-friendly interface minimizes setup and work changeover time.

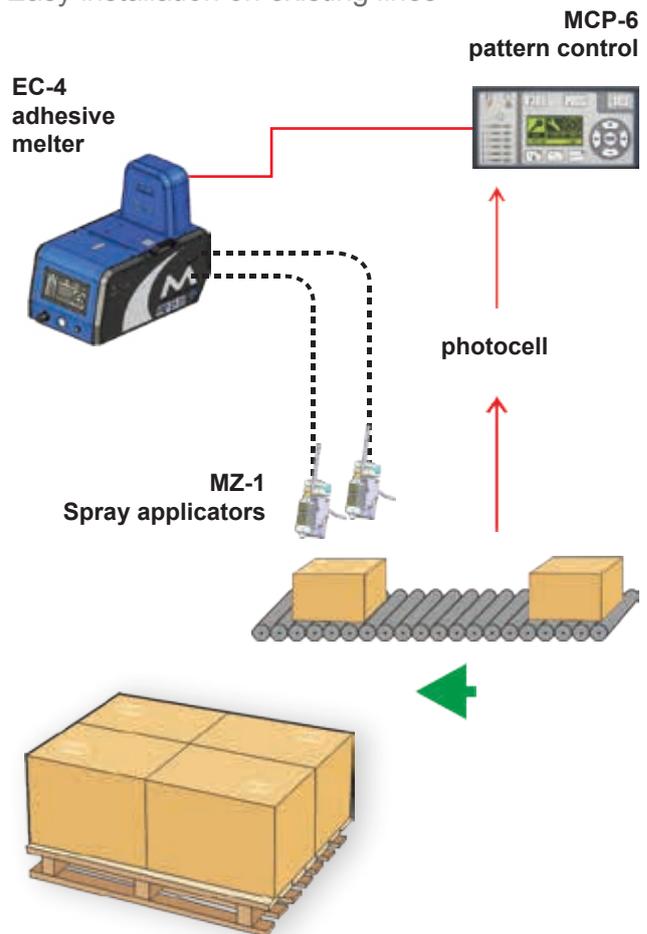

MZ-1 Spray Applicators

Valco Melton's MZ Series Spray Applicators combine the latest in technology with a versatile design that ensures quick and easy adaptation to any machine structure with the most demanding customer configuration requirements.

Hotmelt palletizing solutions support:

- Great savings by eliminating material and reducing disposal and costs associated with labor
- A safer work environment
- Better protection of stacked packages during product handling
- Easy installation on existing lines
