

MCP6 EXTERNAL

Pattern Control System

The MCP-6 external is a full-featured 6 channel adhesive control system available to work collectively with a full line of melt tanks. This system is also available as an external control panel for vertical mount. The MCP-6 can operate any 24 VDC solenoid valve and each channel can handle up to two each. All cables are wired into the board using Phoenix Contact™ connectors which allows the user to attach valve and photo-eyes into the control card. Cables with flying leads are included in all kits.

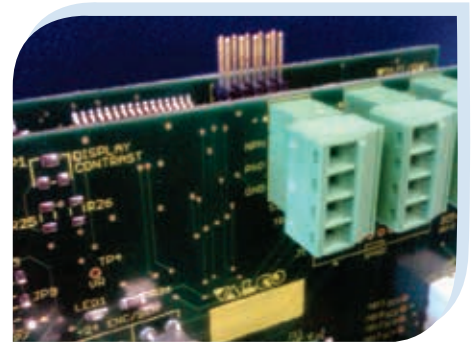

Photo-eye Connections

Valve Connections

Encoder Connections

- 6 programmable 24 VDC outputs and 4 inputs are available.
- Internally mounted boards and components.
- Use in either time-based or speed-based mode.
- Supported with an adhesive reduction stitch mode.
- Works at a maximum speed of 240 m/min (800 ft/min).
- Job storage for up to 99 programs.
