

# BOXCHEK7

## HOW IT WORKS

Work with your glue system and ClearVision inspection cameras with one screen using BoxChek7 inspection software.

Traditional sensors can also be connected to BoxChek7 for full integration and ejection of defective products from your folder gluer.

By controlling a combination of up to 6 cameras and/ or sensor groups, BoxChek7 brings users complete information on production line performance in real time. The screen simultaneously displays job statistics, defect images and history bar to facilitate analysis.

BoxChek7 features an intuitive interface that displays real time images and data from each of the installed systems.

Easily create graph charts for quick evaluation of line performance. For more in-depth analysis including remote data collection and reporting, combine with MeasurementChek.

## BENEFITS

Any corrugated box or folding carton case manufacturing plant can expect the following benefits from using BoxChek7:

- Combine up to 6 cameras/ sensors to detect and identify defective gluing (hot melt or cold glue), folding, barcodes, print registration, corrugator scores, as well as issues with sheets such as skew
- Minimize configuration times with the system's ability to learn the position of the cameras and sensors
- Streamline support sessions using the online chat window

USE BOXCHEK 7 WITH OUR ENTIRE RANGE OF CLEARVISION QUALITY INSPECTION SYSTEMS:
