About me

I am a creative, analytical, and responsible person who faces challenges and solves problems. I am always at the forefront of new technologies. I always have knowledge in my area or some other topics related to my professional field, I am proactive in the search for new opportunities to develop and grow in my professional and personal training. Those opportunities could be in the form of training, a conference, listening to a speaker, or taking on a new project, but the motivation is to increase my knowledge in the field.
